The Kaluga governor visits a Cascade plant

On April 1, acting Kaluga governor Vladislav Shapsha visited Cascade Holding Company (part of Tashir Group) facilities in the city.

Cascade Technologies and Systems is one of the leading energy plants in Kaluga. The acting governor inspected the facility, as well as the Cascade innovative energy center which is expected to open shortly. Vladislav Shapsha discussed future prospects with the company's management. "This is a fast-growing company which manufactures and installs electrical equipment and offers a broad range of services in design and construction for buildings and various structures," he said in conclusion.

The Kaluga plant manufactures modern high-tech electrical equipment for low and medium voltage systems. Producing modern electrical equipment for Russia's major energy and distribution companies is one of the plant's priorities. The plant uses advanced technology and is properly certified by Rosstandart, Russia's technological standards regulator. The company keeps evolving and expanding its line-up, as its production facilities have all the necessary machinery to manufacture any standard or custom-tailored electrical equipment.

About Cascade Holding Company

Cascade Holding Company is one of Russia's leading construction engineering corporations. Since 2005, Cascade has been part of Tashir Group.

The company offers a full range of construction and engineering services, including repair and overhaul of municipal and industrial infrastructure and power grids.

Cascade works on industrial, civil, electrical and infrastructure construction projects. The company plays a prominent role in urban development, municipal affairs and facility maintenance.

The company has 3,000 employees.
